

On the Job and on the Field: Protect Your Team from Heat Stress Hazards

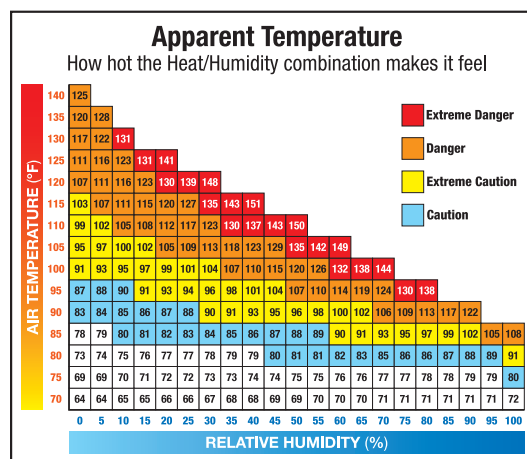

Easy-to-use tools help worksite managers and athletic coaches track Heat Index

WHAT'S HEAT INDEX?

In the heat of summer, the outdoors can be a hazardous place for workers and athletes alike. To show how hot it really feels, meteorologists use temperatures together with humidity levels to calculate Heat Index -- a more accurate temperature reading that reveals the heat stress hazards of extreme summer weather.

A 95°F day with 65% relative humidity actually feels like 119°F!

TAKE THE GUESSWORK OUT OF HEAT-RELATED WORKPLACE AND ATHLETIC DECISIONS:

WORKPLACE: Extech heat index meters help you determine when extra precautions are needed at a worksite to protect workers from heat-related illness. Outdoor workers at risk of heat stress illness include: construction workers, agricultural workers, baggage handlers, electrical power transmission and control workers, landscaping and yard maintenance workers, and others.

ATHLETICS: Nationwide, more and more statewide and collegiate athletics associations are requiring coaches to actively monitor heat index to avoid heat stress injuries among athletes. Extech's compact heat index meters and HeatWatch™ stopwatch are preferred by coaches for high school and college football, soccer, cross country and other athletics programs.

KEEP YOUR COOL WITH EXTECH HEAT INDEX METERS:

HW30 HeatWatch™
Full function stopwatch plus heat index alarm is ideal for industrial process control and also time-tracked outdoor athletics. A coach favorite!

RH25 Heat Index Psychrometer
Pocket meter with 6 temperature/humidity functions and heat index alarm.

AN25 Heat Index Anemometer
Pocket meter measures air velocity and 6 temperature/humidity functions including heat index.

HT30 Heat Stress Wet Bulb Globe Temperature Meter
Measures temperature, humidity, heat index, and the heat effect from sunlight!

"Our sling psychrometer was cumbersome and only provided readings at intervals. The Extech HeatWatch changes all that with real-time monitoring and a heat index alarm."
--High School Coach
